

### Actisaf yeast

Actisaf yeast has been shown to improve intake, increase growth rate (by up to 9%) and promotes feed conversion efficiency, giving you a better return.

Actisaf Sc 47 is a protected live yeast, meaning it doesn't get destroyed by the environment in the gut. The live yeast is protected by from heat and acid by a layer of dead yeast cells. Only Actisaf has this stability, which means that more yeast cells reach the rumen alive, making Actisaf the most cost effective live yeast available.

#### How does it work?

Actisaf:

- Stabilizes rumen pH by reducing the build-up of lactic acid, which causes acidosis.
- Reduces rumen oxygen content and stimulates the growth of rumen organisms that digest fibre and starch, thus increasing feed intake and helping efficient digestion.
- Promotes a healthy rumen environment.

#### What are the benefits of using Actisaf?

- ↑ feed intake
- ↑ growth rates (up to 9%)
- ↑ feed conversion efficiency i.e. more weight produced per kg of feed
- ↑ carcass classification from beef animals fed Actisaf
- ↓ reduced acidosis, lameness and cud balls

Overall, Actisaf creates a healthier, more efficient rumen, which promotes higher intake and better feed utilization, ultimately leading to more productive, healthy and more contented animals.

Actisaf is heat and acid stable and is included in most of our protein pellets and is also available in farm packs (in 25kg bags).
