

IMMU-Gain calf paste

Calves are challenged by a number of dangerous pathogens, infections result in diarrhoea, mortality and lower growth performance.

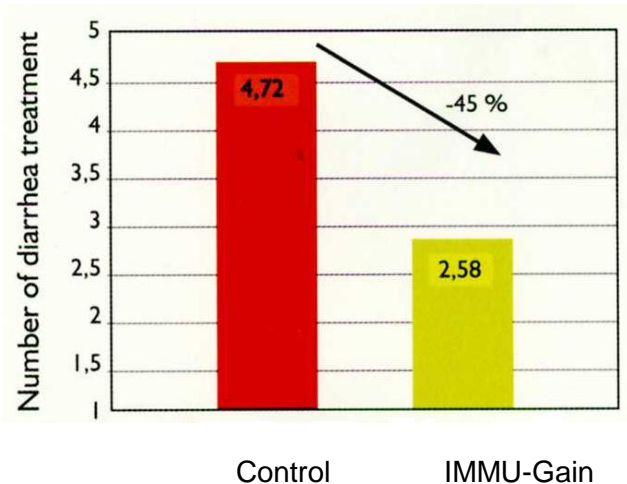

Jamesons IMMU-Gain calf paste is a special feed supplement containing valuable immunoglobulins on a protein carrier. It is used to strengthen the vitality of young calves. It can be used to combat infectious scour, such as rotavirus, coronavirus, salmonella, E coli and cryptosporidia causing diarrhoea. Studies have shown fewer incidences of diarrhoea when using IMMU-Gain calf paste and a reduction in the number of diarrhoea treatments used.

Less diarrhoea

Number of diarrhoea treatments

Dosage: Immediately after birth, feed 10 ml/day on days 1 to 3. In case of acute problems (e.g. high pathogenic pressure) feed 10 ml each over 3 days.

Jamesons produce high quality feeds backed by reliable service and technical support. We are committed to you, your business and the needs of your stock.
